Fredric Suresh, Mayfield S.S., Brampton, ON

The Centre for Education in Mathematics and Computing is pleased to announce the results of the 2016 Canadian Senior and Intermediate Mathematics Contests.

Our congratulations go to all who participated in this year's CSMC and CIMC. This year's Contests were resounding successes, with averages of 31.1 and 34.1, respectively.

As always, we would like to thank the hard-working Problems Committees. Many of the members of these Committees are active secondary school teachers who volunteer their time and contribute dozens of hours of expertise. Without their intriguing and sometimes amusing problems, these Contests would not be possible.

We would also like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Le Centre d'éducation en mathématiques et en informatique à d'annoncer les résultats du Concours canadiens de mathématiques de niveau supérieur et intermédiaire 2016.

Nos félicitations vont à tous les participants du CCMS et du CCMI de cette année. Les Concours de cette année retentissaient de succès, avec des moyennes de 31,1 et 34,1, respectivement.

Nous aimions surtout remercier les Comités de problèmes pour leur dur travail. Plusieurs membres de ces Comités sont des enseignant(e)s d'école secondaire actifs qui offre leur temps et contribuent des douzaines d'heures d'expertise. Sans leurs problèmes perspicaces et amusants, ces Concours ne seraient pas possibles.

Nous aimions remercier aussi tous les participants incluant les enseignants et les étudiants. Nous espérons que les concours vous ont offert des mathématiques intéressantes qui vous ont amusées et portées à réfléchir. Merci pour votre soutien continué!

Comments on the Contests

CANADIAN SENIOR MATHEMATICS CONTEST

Part A

1. Very well done. Some small arithmetic mistakes were made. Larger conceptual errors (such as writing $(1 + 2 + 3)^2 = 1^2 + 2^2 + 3^2$) were less common.
Average: 4.8
2. Well done. A common error was assuming that the second book had the same price as the first one.
Average: 3.8
3. Reasonably well done. Many missed the constraints that the integers should be odd and the list was ordered, while a number found some, but not all, of the lists.
Average: 3.4
4. Well done. The most common reason for lost marks was for a correct strategy with arithmetic errors.
Average: 4.1
5. This question was attempted by many students. Many students thought the probability was 0.5, likely seeing this as an “either Deep wins or he doesn’t” fallacy. Similarly, some students omitted the fact that Gary had won the first two games, which led to either extra computation or incorrect results overall. In terms of successful attempts, many students approached the problem using a tree approach, drawing a picture or list of the possibilities and correctly determine the probability of all such scenarios, in both the 6 or 7 game cases. However, some students treated “winning in 6 games” with the same probability of “winning in 7 games”, which is not the case.
Average: 1.4
6. This was a very difficult problem. Those making any progress did realize that the middle number had to be 4. Many students then recognized the pairing argument that occurs in the positions of the digits. From there, students recognizing both of these facts could often compute Moffat numbers with relative success. Many students however found incorrect solutions, without verifying all conditions, or only found half of the 8 total Moffat numbers.
Average: 0.2

Part B

1. Parts (a) and (b) were well done. In part (c), a common incorrect answer was $N = 100$. In parts (c) and (d), students sometimes had the correct answer but did not completely explain their work.
Average: 7.0
2. Parts (a) and (b) were quite well done. In part (c), we saw a number of solutions where students assumed that point R was on the y -axis, but did not justify this location. Most of the correct solutions to part (d) involved the use of the slope of perpendicular straight lines intersecting at 90 degrees, but some justification was missing when arguing that TS is a diameter.
Average: 5.0
3. Students made good progress with part (a). In part (b), proofs were often written backwards, assuming the conclusion and then going to true results without mention that their steps were reversible. A small fraction of students attempted to prove this using induction and fewer still were successful. Many times, steps were omitted in justifications and these caused gaps in logic that were unclear. In part (c), many students who attempted the problem noticed the pattern in the units digits and successfully computed 12141. However, noticing a pattern is not mathematically sound, and requires more formal proof.
Average: 1.4

Comments on the Contests

CANADIAN INTERMEDIATE MATHEMATICS CONTEST

Part A

1. Very well done. Most students found a common denominator of 24 and then compared the value of each fraction correctly. Some students used decimal approximations. Some of these students erred by writing $\frac{2}{3}$ as approximately 0.6, $\frac{5}{8}$ as equal to 0.625, and then decided that $\frac{2}{3}$ is the smallest of the fractions.
Average: 4.7
2. Well done. Some arithmetic errors were made such as dividing 24 students by 4 instead of 3 to find 8 students equivalent to 25%.
Average: 4.2
3. Well done. Some students had difficulty coming up with the number of gaps that 12 hurdles would give, with answers varying from 9 to 13.
Average: 4.3
4. Well done, though there were a number small problems with many solutions. Students often did not reverse one of the operations correctly, did not reverse the order of the reversed operations correctly, or forgot to reverse the procedure twice.
Average: 4.1
5. Most students attempted this problem and were able to make some progress (for example, by creating some kind of distance/time chart).
Average: 2.4
6. This problem combined different mathematical elements in a non-standard way. While not many students were able to determine the correct answer, some students tried one or more special cases in an attempt to determine a pattern.
Average: 0.3

Part B

1. Very well done. Some students had trouble finding the lengths of the sides of the figures. Some counted dots rather than the spaces between dots and even were inconsistent by doing both. Many students did not see the connection between the 3 diagrams and made each question unique.
Average: 8.5
2. Part (a) was well done. Part (b)(i) was either done correctly or lacked a good explanation. The marking team was impressed by the variety of solutions presented for this part. Part (b)(ii) was well done. Part (c) very well done when Part (b)(i) had been explained correctly. If not, many students found the maximum value of 13 by finding a correct example (*which did not fully justify their statement).
Average: 4.5
3. In part (a), many students obtained one mark by giving a product but did not justify that the 12 was the smallest possible largest factor. In part (b), the answer of 15 was hard to find, with many students giving an answer of 18. A reasonable fraction of students did attempt one or more of parts (c) and (d). The vast majority of these made some conclusion based on some small integer cases.
Average: 1.1

CONCOURS CANADIEN DE MATHÉMATIQUES DE NIVEAU SUPÉRIEUR**Partie A**

1. Ce problème a été très bien réussi. On a remarqué des erreurs mineures d'arithmétique. Les erreurs conceptuelles majeures (comme l'affirmation que $(1 + 2 + 3)^2 = 1^2 + 2^2 + 3^2$) étaient moins fréquentes.
Moyenne: 4,8
2. Ce problème a été bien réussi. Bon nombre d'élèves ont supposé, à tort, que le prix du deuxième livre était le même que celui du premier.
Moyenne: 3,8
3. Ce problème a été assez bien réussi. Bon nombre d'élèves ont omis les contraintes que les entiers devaient être impairs et en ordre croissant, tandis que d'autres n'ont trouvé qu'une partie des listes.
Moyenne: 3,4
4. Ce problème a été bien réussi. La plupart des réponses erronées provenaient d'erreurs de calcul malgré une bonne stratégie.
Moyenne: 4,1
5. Beaucoup d'élèves ont tenté de résoudre ce problème. Beaucoup ont cru que la probabilité était de 0,5, croyant sans doute que Deep pouvait gagner ou perdre avec la même probabilité. De même, certains n'ont pas tenu compte du fait que Gary avait gagné les deux premières parties, ce qui a faussé leur démarche. Parmi les bonnes stratégies utilisées, l'utilisation d'un arbre, d'un dessin ou d'une liste des possibilités s'est avérée utile pour déterminer les séquences de jeux fructueuses de 6 et de 7 parties. Toutefois, certains ont cru que la probabilité de gagner en 6 parties était la même que celle de gagner en 7 parties, ce qui était faux.
Moyenne: 1,4
6. Il s'agissait d'un problème difficile. Ceux qui ont réussi à progresser ont vite compris que le chiffre du milieu devait être 4. Beaucoup d'élèves ont ensuite reconnu la condition pour apparié les chiffres selon les positions. Ils ont ensuite trouvé les nombres Moffat avec assez de succès. Beaucoup d'élèves ont trouvé des réponses erronées sans vérifier les contraintes, tandis que d'autres n'ont trouvé que la moitié des 8 nombres Moffat.
Moyenne: 0,2

Partie B

1. Les parties (a) et (b) ont été bien réussies. Dans la partie (c), la réponse erronée la plus commune a été $N = 100$. Dans les parties (c) et (d), certains élèves ont obtenu les bonnes réponses, mais sans bien justifier leur démarche.
Moyenne: 7,0
2. Les parties (a) et (b) ont été plutôt bien réussies. Dans la partie (c), certains élèves ont supposé que le point R était situé sur l'axe des ordonnées, sans justification. Dans la partie (d), la plupart des bonnes solutions ont fait appel à la propriété des pentes de droites perpendiculaires, mais certaines n'ont pas justifié pourquoi TS était un diamètre.
Moyenne: 5,0
3. La partie (a) a été plutôt bien réussie. Dans la partie (b), les démonstrations ont souvent procédé à rebours, en supposant que la conclusion était vraie pour aboutir à un résultat vrai, mais sans mentionner que les étapes étaient réversibles. Un petit nombre d'élèves ont fait appel au raisonnement par récurrence, souvent sans succès. Souvent des étapes de la justification ont été omises, ce qui a donné des raisonnements flous. Dans la partie (c), beaucoup d'élèves ont remarqué la régularité dans les chiffres des unités et ont réussi à obtenir la bonne réponse 12141. Il faut admettre que reconnaître une régularité n'est pas un argument mathématique et qu'il faut une plus grande justification.
Moyenne: 1,4

CONCOURS CANADIEN DE MATHÉMATIQUES DE NIVEAU INTERMÉDIAIRE

Partie A

1. Ce problème a été très bien réussi. La plupart des élèves ont utilisé un dénominateur commun pour ensuite comparer les numérateurs avec succès. Certains élèves ont utilisé des approximations décimales. Certains de ces élèves ont commis une erreur en attribuant à $\frac{2}{3}$ la valeur approximative de 0,6 et à $\frac{5}{8}$ la valeur de 0,625 pour conclure que $\frac{2}{3}$ est la plus petite de ces deux fractions.

Moyenne: 4,7

2. Ce problème a été bien réussi. Certains élèves ont commis des erreurs conceptuelles ou d'arithmétique. Par exemple, sachant que 24 élèves correspondent à $\frac{3}{4}$ des élèves, certains ont divisé 24 par 4 au lieu de par 3 pour déterminer $\frac{1}{4}$ des élèves.

Moyenne: 4,2

3. Ce problème a été bien réussi. Certains élèves ont éprouvé de la difficulté à déterminer le nombre d'espaces entre les 12 obstacles, donnant comme réponse un nombre de 9 à 13.

Moyenne: 4,3

4. Ce problème a été bien réussi, même si on a constaté quelques difficultés à propos de certaines solutions. Certains élèves n'ont pas renversé une des opérations correctement, d'autres n'ont pas renversé l'ordre des opérations correctement ou n'ont renversé la procédure qu'une seule fois.

Moyenne: 4,1

5. La plupart des élèves ont tenté de résoudre ce problème et ont réussi à progresser un tant soit peu (par exemple, en créant un tableau distance/temps).

Moyenne: 2,4

6. Ce problème faisait appel à divers concepts mathématiques de manière inhabituelle. Bien que peu d'élèves aient réussi à déterminer la bonne réponse, certains élèves ont examiné des cas particuliers dans le but de trouver une régularité.

Moyenne: 0,3

Partie B

1. Ce problème a été très bien réussi. Certains élèves ont éprouvé de la difficulté à déterminer les longueurs des côtés des figures. Certains ont compté le nombre de points au lieu du nombre d'espaces entre les points et certains ont fait les deux. Beaucoup d'élèves n'ont pas remarqué les liens entre les trois figures et ont traité chaque partie de façon indépendante.

Moyenne: 8,5

2. La partie (a) a été bien réussie. La partie (b)(i) a été soit bien réussie, soit faible en explications. L'équipe de notation a été impressionnée par la grande variété de solutions. La partie (b)(ii) a été bien réussie. La partie (c) a été bien réussie lorsque la partie (b)(i) était bien expliquée. Lorsqu'elle était mal expliquée, certains élèves ont trouvé une valeur maximale de 13 en s'appuyant sur un exemple correct (ce qui ne justifie pas complètement leur énoncé).

Moyenne: 4,5

3. Dans la partie (a), beaucoup d'élèves ont obtenu un point en donnant un produit de facteurs, mais sans expliquer pourquoi 12 était le plus petit entier possible qui était le plus grand facteur. Dans la partie (b), la réponse de 15 était difficile à déterminer, alors que beaucoup d'élèves ont répondu 18. Un nombre raisonnable d'élèves ont tenté de répondre aux parties (c) et (d). La majorité de ces élèves ont tiré une conclusion appuyée sur quelques cas numériques.
