Foreword Avant-Propos

The Centre for Education in Mathematics and Computing is pleased to announce the results of the 2011 Canadian Senior and Intermediate Mathematics Contests.

Our congratulations go to all who participated in this year's CSMC and CIMC. This year's Contests were resounding successes, with averages of 32.4 and 32.7, respectively.

As always, we would like to thank the hard-working Problems Committees. Many of the members of these Committees are active secondary school teachers who volunteer their time and contribute dozens of hours of expertise. Without their intriguing and sometimes amusing problems, these Contests would not be possible.

We would also like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Le Centre d'éducation en mathématiques et en informatique à d'annoncer les résultats du Conours canadiens de mathématiques de niveau supérieur et intermédiaire 2011.

Nos félicitations vont à tous les participants du CCMS et du CCMI de cette année. Les Concours de cette année retentissaient de succès, avec des moyennes de 32,4 et 32,7, respectivement.

Nous aimerions surtout remercier les Comités de problèmes pour leur dur travail. Plusieurs membres de ces Comités sont des enseignant(e)s d'école secondaire actifs qui offre leur temps et contribuent des douzaines d'heures d'expertise. Sans leurs problèmes perspicaces et amusants, ces Concours ne seraient pas possibles.

Nous aimerions remercier aussi tous les participants incluant les enseignants et les étudiants. Nous espérons que les concours vous ont offert des mathématiques intéressantes qui vous ont amusées et portées à réfléchir. Merci pour votre soutien continué!

CANADIAN SENIOR MATHEMATICS CONTEST Part A

- 1. Very well done. A common mistake was giving $\frac{31}{16}$ as the final answer and forgetting to multiply by 16. Average: 4.7
- 2. Well done. Quite a few students had trouble formulating the correct equations from the given information. Also, some students needed to take more care when defining their variables to specify whether the ages were now, in the past, or in the future.

Average: 3.5

3. Well done. Common errors included assuming that each of the possible sums 2 through 12 is equally likely, miscounting the number of results giving a perfect square, and drawing only the top or bottom half of the table to obtain a denominator of 21.

Average: 3.5

4. Many students did well on this problem. The most common error was trying to list the divisors by trial and error, and then missing one or more of them.

Average: 2.7

5. Generally very well done. Many students got the answer of 5 without sound mathematical reasoning, perhaps by having seen the numbers 3 and 4 and a right-angled triangle. A significant portion of students failed to divide the chord lengths in half when working with half of the chords.

Average: 3.0

6. This was a difficult problem in which it was very easy to go in circles. Many students wrote one equation comparing two sums from rows/columns/diagonals but nothing more.

Average: 1.0

Part B

1. This question was very well done. In general, it would be helpful to see slightly more in the way of explication or justification of students' work.

Average: 9.2

2. Part (a) was attempted by most students. While most students gave a correct answer, some students gave non-integer values for x and y, while others forgot to give a particular solution even after obtaining x=7y. While parts (b) and (c) were difficult, a good number of students presented complete solutions to these. In parts (b) and (c), many students worked with specific numbers rather than working in a more general setting. An alternate correct solution that appeared a number of times for (b) started with the inequality ad < bc, multiplied both sides by y to obtain ady < bcy, added abx to both sides to obtain abx + ady < abx + bcy, factored to obtain a(bx + dy) < b(ax + cy), and then divided to obtain $\frac{a}{b} < \frac{ax + cy}{bx + dy}$, which is part of the desired inequality .

Average: 3.3

3. Part (a) was generally well done – most students wrote out the cases and counted correctly. Part (b) was attempted by very few students, though a small percentage noticed without much work that if p = m, the result is true.

Average: 1.5

CANADIAN INTERMEDIATE MATHEMATICS CONTEST Part A

1. Very well done.

Average: 4.6

2. Very well done. Quite a few students incorrectly used "guess and check". Also, a number of students subtracted the two given equations to obtain 0 = 4 - c instead of 0 = 4 - 2c.

Average: 4.5

3. This question was fairly well done. The most common mistake was the answer 6, from giving the number of weeks at \$100 per week, rather than the total number of weeks. The majority of students who solved this problem used an algebraic solution.

Average: 4.1

4. Many students did well on this problem. Many students were able to determine that there were 36 equally likely outcomes, but some would then get stuck on either the definition of a perfect square or had too many or too few possibilities. Common mistakes included double counting (2, 2) or not counting rolls like (1, 3) and (3, 1) as separate possibilities.

Average: 2.9

5. In this problem, students either obtained the correct answer or made very little progress, with not much in between.

Average: 2.0

6. This was a very difficult problem. Most students gave the prime factorization of 6^{16} but were unable to proceed further.

Average: 0.3

Part B

1. This question was well done. A number of students used the expression $2\pi r$ for the area of a circle with radius r instead of πr^2 . (Since r=2 in this problem, the answer turns out to be the same.) Most students understood the concept of subtraction of areas, even if they were unable to obtain the correct answer.

Average: 7.8

2. Parts (a) and (b) were well done and most students who attempted part (c) did quite well. Most students solved part (a) by drawing out Figure 4 and adding up the side lengths. Most students solved part (b) by calculating the Ink Lengths of Figures 8 and 9 and then subtracting those two numbers. We required that students provide some justification/explanation of their approach for parts (b) and (c).

Average: 5.1

3. This was a difficult problem to solve, but even more so to write a good solution. Many students used diagrams without any numerical work to attempt the problem. Some students did not read the question carefully to get the meaning of the word cross for the two swimmers and thought that a cross occurred when one of the swimmers reached one of the ends of the pool. Often students gave an answer of one more than the correct answer because they misread the question.

Average: 1.4

CONCOURS CANADIEN DE NIVEAU SUPÉRIEUR Partie A Partie A

1. Ce problème a été très bien réussi. L'erreur la plus commune était de répondre $\frac{31}{16}$, soit la valeur de la parenthèse, en oubliant de la multiplier par 16.

Moyenne: 4,7

2. Ce problème a été bien réussi. Bon nombre d'élèves ont éprouvé de la difficulté à représenter les renseignements par des équations. De plus, certains élèves auraient eu avantage à définir les inconnues avec plus de soin et à spécifier si une inconnue représentait l'âge passé, l'âge présent ou l'âge dans cinq ans.

Moyenne: 3,5

3. Ce problème a été bien réussi. Certains élèves ont supposé que les sommes possibles, de 2 à 12, étaient équiprobables. D'autres ont mal compté les résultats qui donnaient un carré parfait. D'autres ont construit la moitié du tableau des résultats, soit la partie supérieure ou la partie inférieure, ce qui ne leur donnait que 21 résultats équiprobables au lieu de 36.

Moyenne: 3,5

4. Bon nombre d'élèves ont bien réussi ce problème. L'erreur la plus commune résultait de la tentative de trouver les diviseurs par tâtonnements, ce qui entraînait l'omission de certains diviseurs.

Moyenne: 2.7

5. Ce problème a été plutôt bien réussi. Bon nombre d'élèves ont obtenu la réponse de 5 sans l'appuyer par un raisonnement, probablement en voyant des triangles remarquables 3-4-5. Un nombre surprenant d'élèves ont omis de diviser la longueur des cordes par 2 lorsqu'ils ont travaillé avec les demi-cordes.

Moyenne: 3,0

6. Ce problème était difficile et en tentant de le résoudre, il était assez facile de tourner en rond. Bon nombre d'élèves ont écrit une seule équation, en comparant une rangée et une colonne, une diagonale ou une autre rangée, mais rien de plus.

Moyenne: 1,0

Partie B

1. Ce problème a été très bien réussi. De façon générale, il serait bon que les élèves justifient davantage leur travail.

Moyenne: 9.2

2. La majorité des élèves ont tenté de résoudre la partie (a). La plupart d'entre eux ont donné une bonne réponse, mais certains ont donné des valeurs fractionnaires de x et de y, tandis que d'autres n'ont pas pu donner une réponse, même après avoir obtenu l'équation x=7y. Un bon nombre d'élèves ont réussi les parties (b) et (c) qui étaient tout de même assez difficiles. Bon nombre d'élèves ont tenté de répondre en travaillant avec des valeurs particulières des variables, plutôt que de considérer une situation générale. Dans la partie (b), bon nombre d'élèves ont utilisé une approche différente avec succès, en multipliant les deux membres de l'inégalité ad < bc par y pour obtenir ady < bcy, puis en ajoutant abx à chaque membre pour obtenir abx + ady < abx + bcy, en factorisant pour obtenir a(bx + dy) < b(ax + cy), puis en divisant pour obtenir $\frac{a}{b} < \frac{ax + cy}{bx + dy}$, ce qui représente une partie de l'inégalité que l'on cherche.

Movenne: 3,3

3. La partie (a) a été plutôt bien réussie. Les élèves ont réussi à écrire tous les cas et à compter correctement Très peu d'élèves ont tenté de répondre à la partie (b), mais certains ont remarqué, sans fournir trop de travail, que le résultat est vrai lorsque p=m.

Movenne: 1,5

CONCOURS CANADIEN DE NIVEAU INTERMÉDIAIRE Partie A

1. Ce problème a été très bien réussi.

Moyenne: 4,6

2. Ce problème a été très bien réussi. Bon nombre d'élèves ont procédé par tâtonnements. D'autres ont soustrait les deux équations, membre par membre, pour obtenir 0 = 4 - c au lieu de 0 = 4 - 2c.

Moyenne: 4,5

3. Ce problème a été assez bien réussi. L'erreur la plus commune découlait de l'utilisation du nombre de semaines à 100 \$ plutôt que du nombre total de semaines pour le calcul de la moyenne, ce qui donnait une réponse de 6. La majorité des élèves qui ont réussi ont utilisé une méthode algébrique.

Moyenne: 4,1

4. Bon nombre d'élèves ont réussi ce problème. Bon nombre ont déterminé le nombre correct de résultats équiprobables, soit 36, mais certains ne semblent pas avoir compris ce qu'était un carré parfait et ont donné une réponse erronée. Certains ont compté deux fois le résultat (2, 2) ou ont considéré les résultats (1, 3) et (3, 1) comme étant identiques.

Moyenne: 2,9

5. Les élèves ont soit bien réussi, soit rien accompli du tout.

Moyenne: 2,0

6. Ce problème était très difficile. La plupart des élèves ont exprimé 6^{16} en factorisation première, sans pouvoir continuer.

Moyenne: 0,3

Part B

- 1. Ce problème a été très bien réussi. Certains élèves ont utilisé l'expression $2\pi r$, plutôt que πr^2 , pour calculer l'aire d'un cercle de rayon r. (Puisque dans ce problème r=2, la réponse numérique était la même.) La plupart des élèves comprenaient qu'il s'agissait de soustraire des aires, même ceux qui n'ont pas réussi.
 - Moyenne: 7,8
- 2. Les parties (a) et (b) ont été bien réussies et ceux qui ont entrepris de résoudre la partie (c) ont bien réussi. La plupart des élèves ont résolu la partie (a) en traçant la figure 4 et en additionnant les longueurs des côtés. La plupart des élèves ont résolu la partie (b) en déterminant la longueur des lignes des figures 8 et 9 et en soustrayant les résultats. Dans les parties (b) et (c), les élèves devaient appuyer leur travail par des explications ou une justification.

Moyenne: 5,1

3. Ce problème était difficile à résoudre, mais il était encore plus difficile de rédiger une solution complète. Bon nombre d'élèves ont tenté de procéder en fournissant des diagrammes, sans explications et sans travail numérique. Certains élèves n'ont pas lu l'énoncé avec attention et croyaient qu'une rencontre était réalisée lorsqu'un nageur atteignait une extrémité de la piscine. Souvent, la réponse des élèves était 1 de plus que la bonne réponse, sans doute à cause d'une mauvaise lecture de l'énoncé.

Moyenne: 1,4
